

For Safehip to be effective, the pants must fit correctly. Women's hip protectors are sized by the hip measurement, Men's pants are sized according to the waist measurement.

Safehip may be purchased directly from Robinson Healthcare mail order or through NHS logistics.

SAFEHIP®

Hip protectors.
The hard facts speak for themselves.

SAFEHIP®

The evidence based Hip Protection System

“ Clinical studies throughout the world among nursing home residents and home dwellers prove that the SAFEHIP® hip protector reduces the number of hip fractures by up to 75%. At the same time the wearers feel more comfortable and mobile in their everyday life.”

”

Hindso K. Lauritzen JB. Osteoporosis International 1998;8:119

THE SOLUTION

Safehip is proven to be effective in the prevention of hip fractures in the elderly. It is a CE marked medical device - therefore the leading hip protection system.

In a fall, Safehip spreads and disperses the impact away from the hip joint and into the surrounding tissues, which are far more able to take the impact.

By significantly reducing the risk of hip fractures, Safehip can:

- Prevent hospitalisation and subsequent disability.
- Save fallers from the trauma, pain and disability of a broken hip.
- Improve patient confidence and quality of life.

THE FACTS

Not all hip protectors are the same

There are many designs for hip protectors - they are not all the same - and only a few of them have ever been proven to work in randomised clinical trials.

Reference: RoSPA, *Staying Alive*, Summer 2004, page 2.

The hip protectors in Safehip are proven in protecting against hip fractures in elderly people.

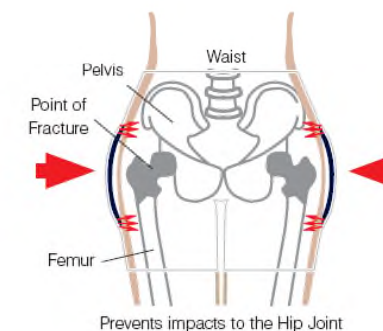

Use hip protectors that have hard evidence that they work

Not only do you need evidence that people will wear a particular type of hip protector, you also need hard evidence that they work.

Reference: SDMA Hip Protector Standard group.

Safehip has gained a significant amount of evidence in randomised controlled clinical trials to show that its hard protectors can actually work in practice - including trials published in the *Lancet* and the *BMJ*.

Reference: Professor Jes Bruun Lauritzen, et al., *The Lancet*.
Reference: Meyer et al., *BMJ* 2004

Use hip protectors that keep on working

- hip protectors must keep on working, fall after fall.
- The hard hip protectors in Safehip are designed to provide protection for the lifetime of the product.
- Safehip hard hip protectors are particularly hard wearing and resistant to damage in use. All Safehip Hip Protectors are CE marked as Class I Medical Devices.

Use hip protectors designed for comfort

The hip protectors in Safehip are designed for comfort. They are anatomically shaped and fully cushioned to make sure of comfort in use.
